Thanks to the care
I received—from orthopedic
surgery to rehab—I was able
to get back on my feet with
confidence.

Darren Luttrell
FARMER. NEIGHBOR. OHIO COUNTIAN.

OCH – Center of Excellence

At Ohio County Healthcare, our commitment has always been to provide exceptional care close to home. We're proud to share that our dedication to quality, safety, and patient outcomes has recently been recognized with two accreditations from Surgical Review Corporation (SRC): Center of Excellence in Robotic Surgery and Center of Excellence in Orthopedic Surgery.

These nationally recognized accreditations are awarded only to organizations that meet rigorous standards for clinical excellence. Even more exciting, Ohio County Healthcare is the first hospital in Kentucky to earn SRC's Center of Excellence in Orthopedic Surgery designation.

These achievements reflect the hard work and expertise of our entire surgical team. During SRC's comprehensive review process, our facility, physician experience, surgical outcomes, patient education programs, and quality assurance practices were thoroughly evaluated. I am especially proud that both our robotic surgery and orthopedic programs received zero deficiencies during their audits.

Since opening our Surgical Unit in October 2023, Ohio County Healthcare has performed more than 1,300 robotic procedures and over 2,100 orthopedic surgeries. Our robotic surgery program continues to grow under the leadership of Dr. Michael Campbell and Dr. Elizabeth Ottman, both of whom earned SRC designation as Surgeons of Excellence in Robotic Surgery. Our orthopedic team, led by Dr. Mark McGinnis and Dr. Mikel Tihista, was also recognized for

exceptional surgical volumes and quality outcomes.

In 2024, we expanded our orthopedic capabilities with the addition of the Mako SmartRobotics™ system, which has already assisted in more than 434 joint replacement procedures. This technology allows for greater surgical precision and helps many patients experience less pain and faster recovery.

While we are honored to receive these accreditations, what matters most is what they mean for our patients. These distinctions affirm that our community has access to nationally recognized surgical and orthopedic care right here at home.

Thank you for continuing to place your trust in Ohio County Healthcare. We remain committed to investing in advanced technology, recruiting outstanding providers, and delivering the highest level of care to the communities we serve.

Best Regards,
Shellie Shouse,
CEO
Ohio County Healthcare

RECOGNIZING OCH ACCREDITED MASTER SURGEONS IN ROBOTIC SURGERY

Michael Campbell, MD
*MASTER SURGEON
IN ROBOTIC SURGERY*

Elizabeth Ottman, MD
*MASTER SURGEON
IN ROBOTIC SURGERY*

Dr. Michael Campbell, General Surgeon, and Dr. Elizabeth Ottman, Gynecologic Surgeon, have more than 45 years of surgical experience combined. Both were instrumental in establishing and expanding OCH's robotic surgery program, serving as champions for both the implementation of robotics technology and the development of OCH's new surgery unit. Through this, they have played an important role in bringing advanced treatment options closer to home for patients who might otherwise need to travel for care.

RECOGNIZING OCH ACCREDITED MASTER SURGEONS IN ORTHOPEDIC SURGERY

Mark McGinnis, MD
*MASTER SURGEON
IN ORTHOPEDIC SURGERY*

Mikel Tihista, MD
*MASTER SURGEON
IN ORTHOPEDIC SURGERY*

Dr. Mark McGinnis and Dr. Mikel Tihista, Orthopedic Surgeons, have played a key role in the growth and success of OCH's orthopedic program, expanding access to high-quality orthopedic care close to home. Dr. McGinnis has been instrumental in building patient trust and strengthening the orthopedic service line, while Dr. Tihista has brought valuable experience from his time in the military and has allowed OCH to expand access to orthopedic services to the communities we serve.

Congratulations

OCH – Center of Excellence

to our Orthopedic Team for receiving a Center of Excellence accreditation in Orthopedic Surgery. OCH is the first facility in the state to have received this designation from Surgical Review Corporation.

What Is a Rotator Cuff Tear?

The rotator cuff is a group of muscles and tendons that surround the shoulder joint. These tissues help keep the shoulder stable and allow you to lift and rotate your arm. When one of these tendons becomes torn, it can lead to pain, weakness, and difficulty performing everyday activities. Rotator cuff tears may occur suddenly from an injury or develop gradually over time due to wear and tear.

Common Symptoms Include:

Shoulder pain, especially when lifting the arm; Difficulty reaching overhead; Weakness in the shoulder; Pain that worsens at night; A clicking or cracking sensation during movement.

When Is Surgery Recommended?

Not every rotator cuff tear requires surgery. Many patients improve with rest, medication, physical therapy, or other conservative treatments. However, surgery may be recommended when pain persists; weakness affects daily activities, or the tear is large or caused by an acute injury.

Recovery Takes Time, But the Results Can Be Life-Changing

Recovery from rotator cuff surgery typically includes healing and physical therapy to help restore

strength and movement. Many people experience significant improvements in pain, function, and quality of life.

Do Not Ignore Shoulder Pain

Persistent shoulder pain is not something you have to simply live with. If pain, weakness, or limited mobility is preventing you from enjoying daily activities, help may be available. The orthopedic team at OCH is committed to helping patients return to the activities they love through personalized treatment plans and advanced surgical care. To learn more about our orthopedic practices visit ochcares.com/ortho.

Back to Living Life Without Shoulder Pain

Darren Luttrell

How One Patient Found Relief Through Rotator Cuff Surgery at OCH

For months, Darren Luttrell struggled with shoulder pain that affected nearly every part of his daily life. Simple tasks like reaching into a cabinet, lifting objects, working around the house, and enjoying favorite activities became increasingly difficult.

Together with his provider, Dr. Mark McGinnis, Darren discussed treatment options and ultimately decided that surgery offered the best chance for long-term relief.

Today, after surgery and rehabilitation, Darren is back to doing the things he enjoys.

“My entire experience from surgery to rehab was excellent! The surgical unit was wonderful, and everyone there was incredibly kind. I would recommend OCH for all of your healthcare needs!”

Kidney Stones: What You Need to Know

If you've ever had a kidney stone, you know the pain can be intense. Kidney stones affect millions of Americans each year and can happen to anyone, but there are steps you can take to lower your risk.

Your kidneys play an important role in filtering waste and extra fluid from your blood. Sometimes minerals and salts in the urine can stick together and form hard deposits called kidney stones. These stones can remain in the kidney or travel into the urinary tract, where they may cause significant discomfort.

Who Is at Risk?

Several factors can increase your chances of developing kidney stones, including:

- Not drinking enough water
- Diets high in sodium (salt)
- High intake of animal proteins
- Obesity
- Diabetes
- Family history of kidney stones
- Certain medical conditions and medications
- People who have had one kidney stone are also more likely to develop another in the future.

Common Symptoms of Kidney Stones

Many people don't know they have a kidney stone until it begins to move. Symptoms may include:

- Severe pain in the side, back, or lower abdomen
- Pain that comes and goes in waves
- Pain that spreads toward the groin
- Blood in the urine, causing urine to appear pink, red, or brown
- Frequent or painful urination
- Cloudy or foul-smelling urine
- Nausea or vomiting
- Fever or chills, which may indicate an infection and require immediate medical attention.

Stomach Pain

Dizziness

Vomiting

Backache

Blood In The Urine

Fever

Prevention Starts with Hydration

One of the best ways to prevent kidney stones is to stay well hydrated. Make water a regular part of your day and drink plenty of fluids to help reduce your risk.

Other healthy habits that may help reduce your risk include:

- Limiting high-sodium foods
- Eating a balanced diet rich in fruits and vegetables
- Maintaining a healthy weight
- Following your provider's recommendations if you've had kidney stones before
- It's important to note that most people should continue consuming normal amounts of calcium through food, as reducing dietary calcium can actually increase the risk of certain kidney stones.

When Should You See a Provider?

You should seek medical attention if you experience severe pain, blood in your urine, difficulty urinating, fever, or chills. Early diagnosis and treatment can help prevent complications and get you feeling better sooner.

Urology Care Close to Home

Ohio County Healthcare's urology team provides evaluation and treatment for kidney stones and other urinary tract conditions. Whether you're experiencing symptoms for the first time or have a history of recurring stones, our providers can help determine the cause and develop a treatment plan that's right for you.

See below for information about our urology services, or visit OCHcares.com/urology to learn more.

Urology Services at Ohio County Healthcare

At OCH, urological care is complete and convenient.

Amy Shelton, APRN

Same Day and Next Day
Appointments are Available.

**CALL NOW to schedule
an appointment.**

270-504-1300

No time to schedule?

Amy Shelton, APRN, now offers walk-in hours every Monday and Wednesday from 8 AM - 12 PM.

Walk-in appointments are available for acute concerns that require prompt evaluation, including:

- Urinary tract infection (UTI) symptoms
- Painful urination (dysuria)
- Urinary frequency or urgency
- Hematuria (blood in urine)
- Urinary retention or difficulty urinating
- Flank or kidney pain
- Suspected kidney stones
- Catheter-related concerns or catheter changes
- Testicular pain or swelling
- Scrotal swelling
- Acute pelvic pain related to urologic conditions
- Post-procedure urinary concerns
- New onset urinary incontinence
- Recurrent urinary infections
- Elevated post-void residual symptoms
- Acute bladder discomfort or pressure

Patients experiencing severe symptoms, chest pain, difficulty breathing, high fever, or other medical emergencies should be directed to the Emergency Department.

Welcome, Dr. Dylan & Dr. Claire Sanford

Our newest primary care physicians are now accepting new patients.

Dr. Dylan Sanford and Dr. Claire Sanford recently completed their internal medicine residencies and are beginning the next chapter of their careers at Ohio County Healthcare. As a husband-and-wife physician team, they have shared much of their journey through medical school and residency. Now, they are excited to build relationships with patients and become part of the Ohio County community.

We asked them a few questions to help you get to know the physicians behind the white coats.

What draws you to the Ohio County area?

Dylan: Kentucky has always been home, and I've always hoped to build my career serving the people of my home state. The opportunity to practice in Ohio County is especially meaningful because it allows me to give back to my community. I'm looking forward to caring for patients here and becoming a trusted part of the community.

Claire: I remember having the opportunity to shadow a provider in Ohio County when I was in high school. I later returned as a medical student for a clinical rotation,

which confirmed that this was the kind of community where I wanted to practice medicine. Seeing the strong relationships providers had built with their patients and families left a lasting impression on me. It showed me the value of practicing medicine in a community where you can build long-term relationships and care for generations of families. Having the opportunity to return to Ohio County as a physician is incredibly meaningful and truly feels like a full-circle moment.

As a physician who recently finished residency, why should a patient choose you?

Dylan: I think that's a fair question. My residency gave me strong training and experience caring for patients with a wide range of medical conditions. One advantage of recently finishing training is that I'm up to date on the latest evidence-based care. More importantly, I want my patients to know I'll listen to them, treat them with respect, and work hard to earn their trust.

Claire: I think that is a valid question. Having recently finished residency means my medical

knowledge is current, and I have spent the past three years caring for patients with a wide range of medical conditions while working alongside experienced physicians. I also recognize that becoming a great physician doesn't stop at the end of residency. I'm committed to continuing to learn throughout my career so I can provide the best care possible for my patients.

What's your favorite thing about the medical field?

Dylan: My favorite part of medicine is building relationships with my patients. I enjoy partnering with my patients to help them reach their healthcare goals. The long-term relationships are what make internal medicine so rewarding.

Claire: I like that medicine keeps me on my toes. There's always something new to learn, and I enjoy the challenge of figuring out complex problems while also getting to know my patients over time. I don't think it's a career where you ever stop learning, and that's one of the things that drew me to it in the first place.

How do you plan to get involved outside of the clinic?

Dylan: I plan to become involved with the Ohio County Healthcare Mobile Access Clinic and help expand access to medical care for those in need. Giving back to my community has always been a goal of mine, and I'm grateful for the chance to do that here in Ohio County.

Claire: I look forward to getting involved in the community beyond the clinic. I would like to visit local schools and talk with students who are interested in healthcare. I remember how meaningful those experiences were for me, and I'd love the opportunity to do the same for someone else.

What's the benefit of having a spouse in the same medical field at the same healthcare system?

Dylan: My wife and I have been blessed to share the journey through medical school and residency. Having someone who understands both the rewards and challenges of medicine has been very helpful throughout our training. We look forward to becoming part of the community.

Claire: I think it's an advantage. We bounce ideas off each other, learn from one another, and are there for each other after the hard days. Plus, I'll always have someone to eat lunch with!

A good book, good music, or good walk... which do you prefer?

Dylan: I would choose a good walk. My wife and I love spending time outdoors. We enjoy taking our French Bulldog, Benji, for a walk.

Claire: A good book! Bonus if it is an audiobook that I can enjoy while on a walk. Right now, I'm reading the Throne of Glass series.

If you had a weekend off work, what would that weekend look like?

Dylan: My ideal weekend is one spent with friends and family. I enjoy playing golf, fishing at Rough River, and watching college basketball.

Claire: Normally, my weekends consist of catching up on things like laundry, cleaning and grocery shopping. During residency, we called two days off a "golden weekend," and they were my favorite because they gave me time to reset and catch up with friends and family. My ideal weekend is spent at home cooking a good meal, relaxing, and having a ballgame on in the background so I have an excuse to make buffalo chicken dip!

What do you want patients to know before their first visit?

Dylan: I want my patients to know that I'm here to listen and work with them. Every patient is different, and I want to understand their individual needs and goals so we can create a plan that works for them.

Claire: I want patients to feel comfortable asking questions and sharing their concerns. I know that seeing a new provider can sometimes be stressful, so I want each patient to feel heard, respected and comfortable during their visit. My goal is to build a relationship with my patients that continues over time.

Call 270-504-1300

**to Establish Care with either
Dr. Claire Sanford or Dr. Dylan Sanford.**

“ I'm up to date on the latest evidence-based care. I want my patients to know I'll listen to them, treat them with respect, and work hard to earn their trust.

Dylan Sanford, MD

We're excited to welcome Dr. Dylan and Dr. Claire Sanford to Ohio County Healthcare and look forward to all they'll bring to our community.

Both physicians are accepting new patients ages 18 and older.

Welcoming New Nurses from the Philippines to OCH

Like many rural hospitals across the country, Ohio County Healthcare continues to seek experienced healthcare professionals to help meet the needs of our patients and community. This year, OCH welcomed four registered nurses from the Philippines: Sheila Torres, Angela Cabico, Visitacion "Visie" Macalingay, and Jose "Jelo" Manongsong.

Their journey to Kentucky was years in the making. Each nurse completed extensive education, training, licensing, and international recruitment requirements before joining the OCH team. Together, they bring decades of nursing experience from the Philippines, the Middle East, and other healthcare settings around the world.

For these nurses, the move to Kentucky represents both a professional opportunity and a personal sacrifice. Many have left parents, siblings, and extended family behind while building new lives in the United States. Some are raising young

children, while others are pursuing long-term goals of professional growth and becoming part of the communities they now serve.

Despite being far from home, they have found a warm welcome at Ohio County Healthcare and in our community. Each nurse brings a unique background and years of experience to the OCH team. Patients visiting OCH may be cared for by one of these nurses, whose experiences span emergency medicine, critical care, and bedside nursing.

If you see Sheila, Angela, Visie, or Jelo around OCH or in the community, make them feel welcome. Don't be afraid to introduce yourself, say hello, and help them feel at home here. Ohio County Healthcare is proud to welcome these four nurses to our team and grateful for the experience they bring to the patients and families we serve.

Dr. Lalama and participants

Test Kitchen with Chef Jeremy Imas & Haley Berry, RD

Through our partnership with Morrison Healthcare Food Service, we were able to bring a teaching kitchen to the market for free fruit pizza-making sessions.

This activity was a part of OCH's #FoodisMedicine initiative and was a fun way to show kids that healthy eating can be colorful, creative and delicious. Kids also learned about building a balanced plate with our MyPlate bracelets, featuring fruits, vegetables, grains, protein and dairy, along with the importance of eating a rainbow of fruits and vegetables.

Kid's Day at the Farmer's Market

Community Blood Drive

OCH hosted a community blood drive with the Western Kentucky Regional Blood Center on August 27 at the OCH Main Campus in Hartford. Employees and community members came together to donate blood and help support local patients in need.

Thank you to everyone who donated and helped make the blood drive a success!

Ashley Rhye, RN

Shellie Shouse, CEO

OCH was proud to participate in the How to Survive & Thrive event at Ohio County Park. The event brought community members and local organizations together to promote suicide awareness, mental health education and connection while sharing resources and practical skills.

JOIN OUR TEAM

Being one of the largest employers in the area, Ohio County Healthcare is continually searching for talented individuals to join our team. New positions are posted weekly and can be found on our website. With locations throughout Ohio County, Daviess County, and Butler County, we have many opportunities for anyone looking to join our growing organization!

We're currently hiring:

- Certified Nursing Assistant - Med Surg
- Clinical Assistants / Certified Medical Assistants
- Housekeeping - Part Time
- Phlebotomists
- Physical Therapist
- Skilled Maintenance
- X-Ray Technicians

FROM ONE HOSPITAL TO A HEALTHCARE SYSTEM

Seven decades of growth have transformed Ohio County Healthcare from a small hospital into a healthcare system serving communities throughout our region. Today, with more than 14 locations throughout three counties, 75 physicians and advanced practice providers, and more than 850 employees, we continue to expand the care and services we offer while staying true to what has always mattered most: providing Outstanding Care to the communities we serve.
